ASSEMBLY OF GMCS

Top-Down Cloud Assembly

- H_2 emerges from instabilities in compressed atomic gas layers
- Shocks from spiral density waves, SNR, converging flows
- Cloud lifetimes = H_2 lifetimes \leq arm crossing time $\sim 10\text{-}50$ Myr

Koda+ 2016

Bottom-Up Assembly

- GMCs build up from existing small H_2 clouds in spiral arms
- GMCs disassemble into smaller H_2 clouds upon exiting spiral potential that transit to next arm
- H_2 lifetimes are much longer than cloud lifetimes ($> 10^8$ years)

How long does it take to form a molecular cloud?

Paul C. Clark,^{1★} Simon C. O. Glover,^{1★} Ralf S. Klessen^{1★} and Ian A. Bonnell^{2★}

Converging flow simulation using Gadget2 SPH code

- Follow chemistry evolution of H,C in simplified network
- $M=4 \times 10^4 M_{\text{sun}}$, Volume=111 pc x 36 pc x 36 pc
- vflow=6.8 (slow), 13.6 (fast) km/s

Tracing the formation of molecular clouds via [C II], [C I], and CO emission

Converging flow simulation using AREPO

- Collision velocities: +/- 3.5 km/s
- Varied G_{\odot} : 1.7, 5.1, 17 Habings; CRIR: 3×10^{-17} , 9×10^{-17} , 3×10^{-16} sec⁻¹
- Simulation halted once sink particles appear
- Radiative transfer/excitation to derive [CII], [CI], CO intensities and profiles

Converging Flow --- Clark+ 2019

Clark+ 2012

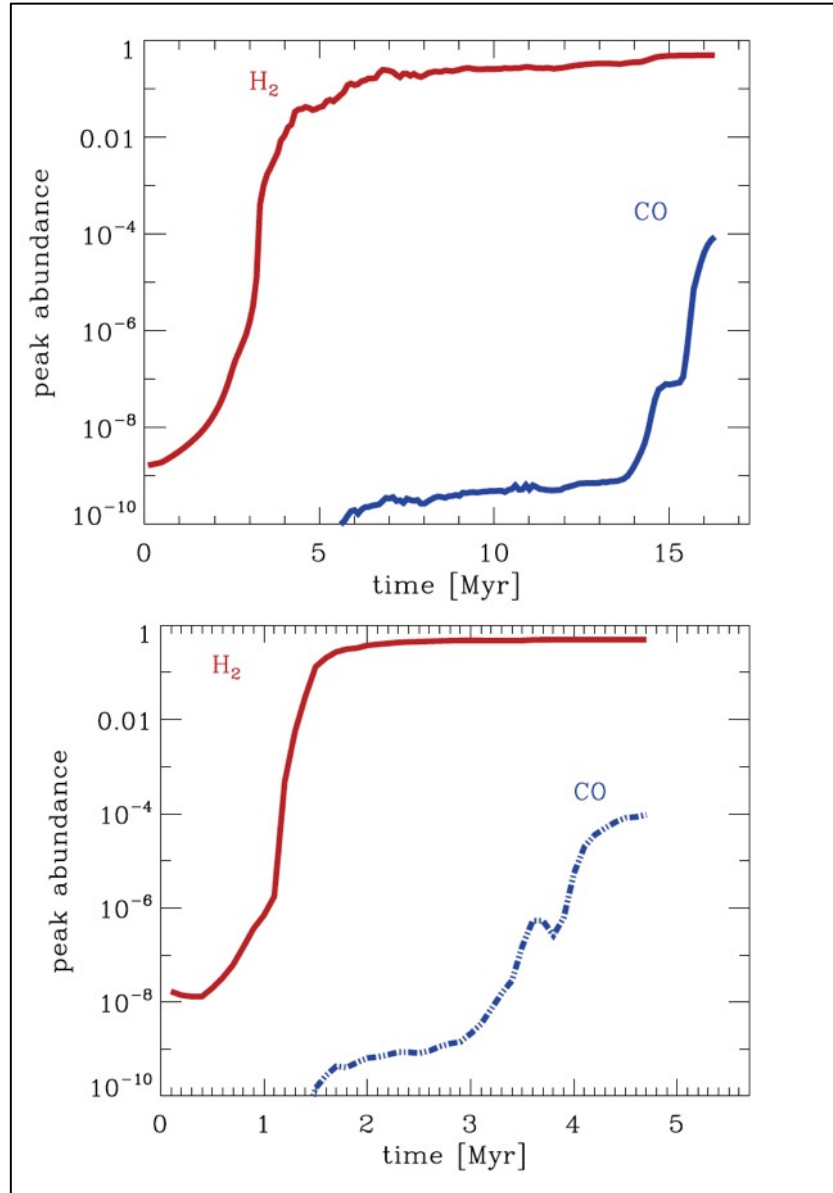

$M (n > n')$

$v_{\text{flow}} = \pm 3.4 \text{ km/s}$

$v_{\text{flow}} = \pm 6.8 \text{ km/s}$

$v_{\text{flow}} = \pm 3.4 \text{ km/s}$

$v_{\text{flow}} = \pm 6.8 \text{ km/s}$

Kinematic Signatures to converging flows

[CII]:

- Most emission originates from atomic gas (little dark CO) with $T < 100$ K
- Brightest emission aligned with [CI], CO
- Faint striation features connect bright emission at $v_z = 0$ to the faint bridges at ± 4 km/s.

upGREAT instrument U. Cologne/MPIfR

LFA:

- 14 pixels (7x2 polarizations)
- Freq: 1.835-2.007 THz
- FFT Spectrometers:
 BW=4 GHz, 244 kHz resolution
- 14.1" beam at 1.9 THz

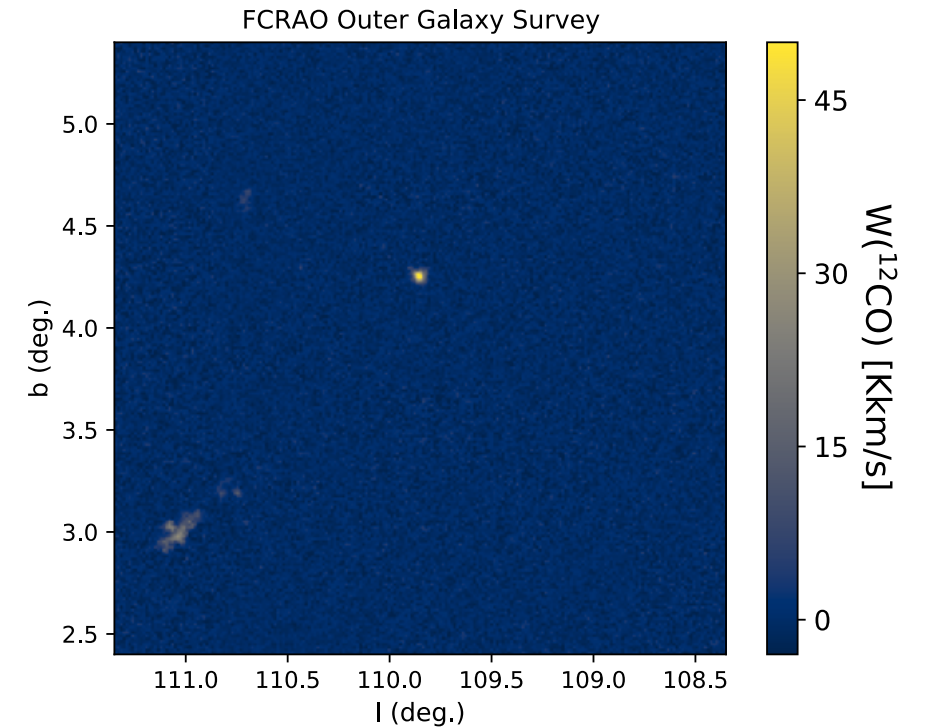

Target: BKP 7323

Brunt+ 2003 catalog of clouds in the FCRAO Outer Galaxy Survey

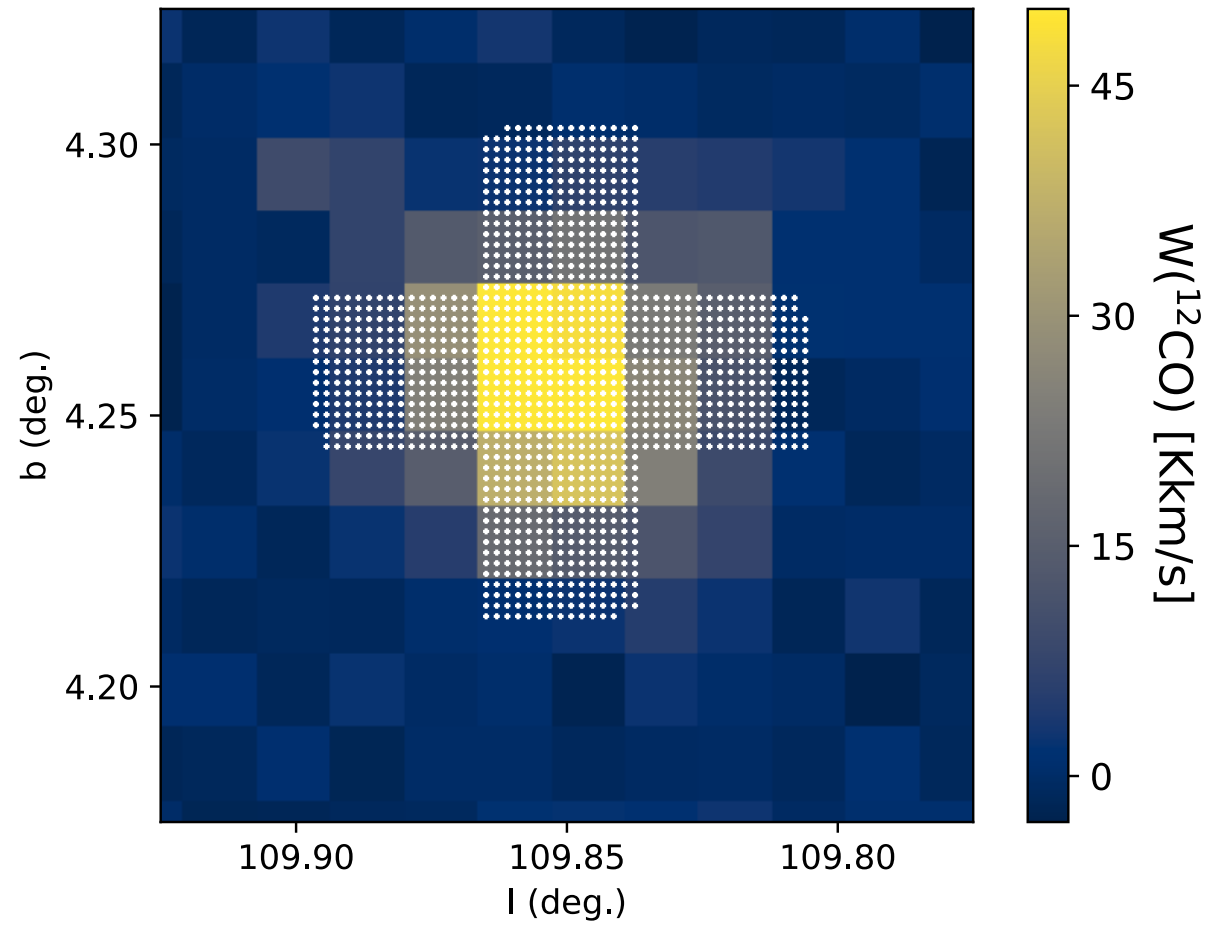

- Distance=3.23 kpc
- 1100 Msun, R=3 pc
- star formation activity (Ragan+ 2012, Beuther+2021) ISOSS J22478+6357

Data:

- SOFIA/upGREAT (Cycle 8)
- FCRAO Outer Galaxy Survey (^{12}CO)
- DRAO/CGPS (HI 21cm)

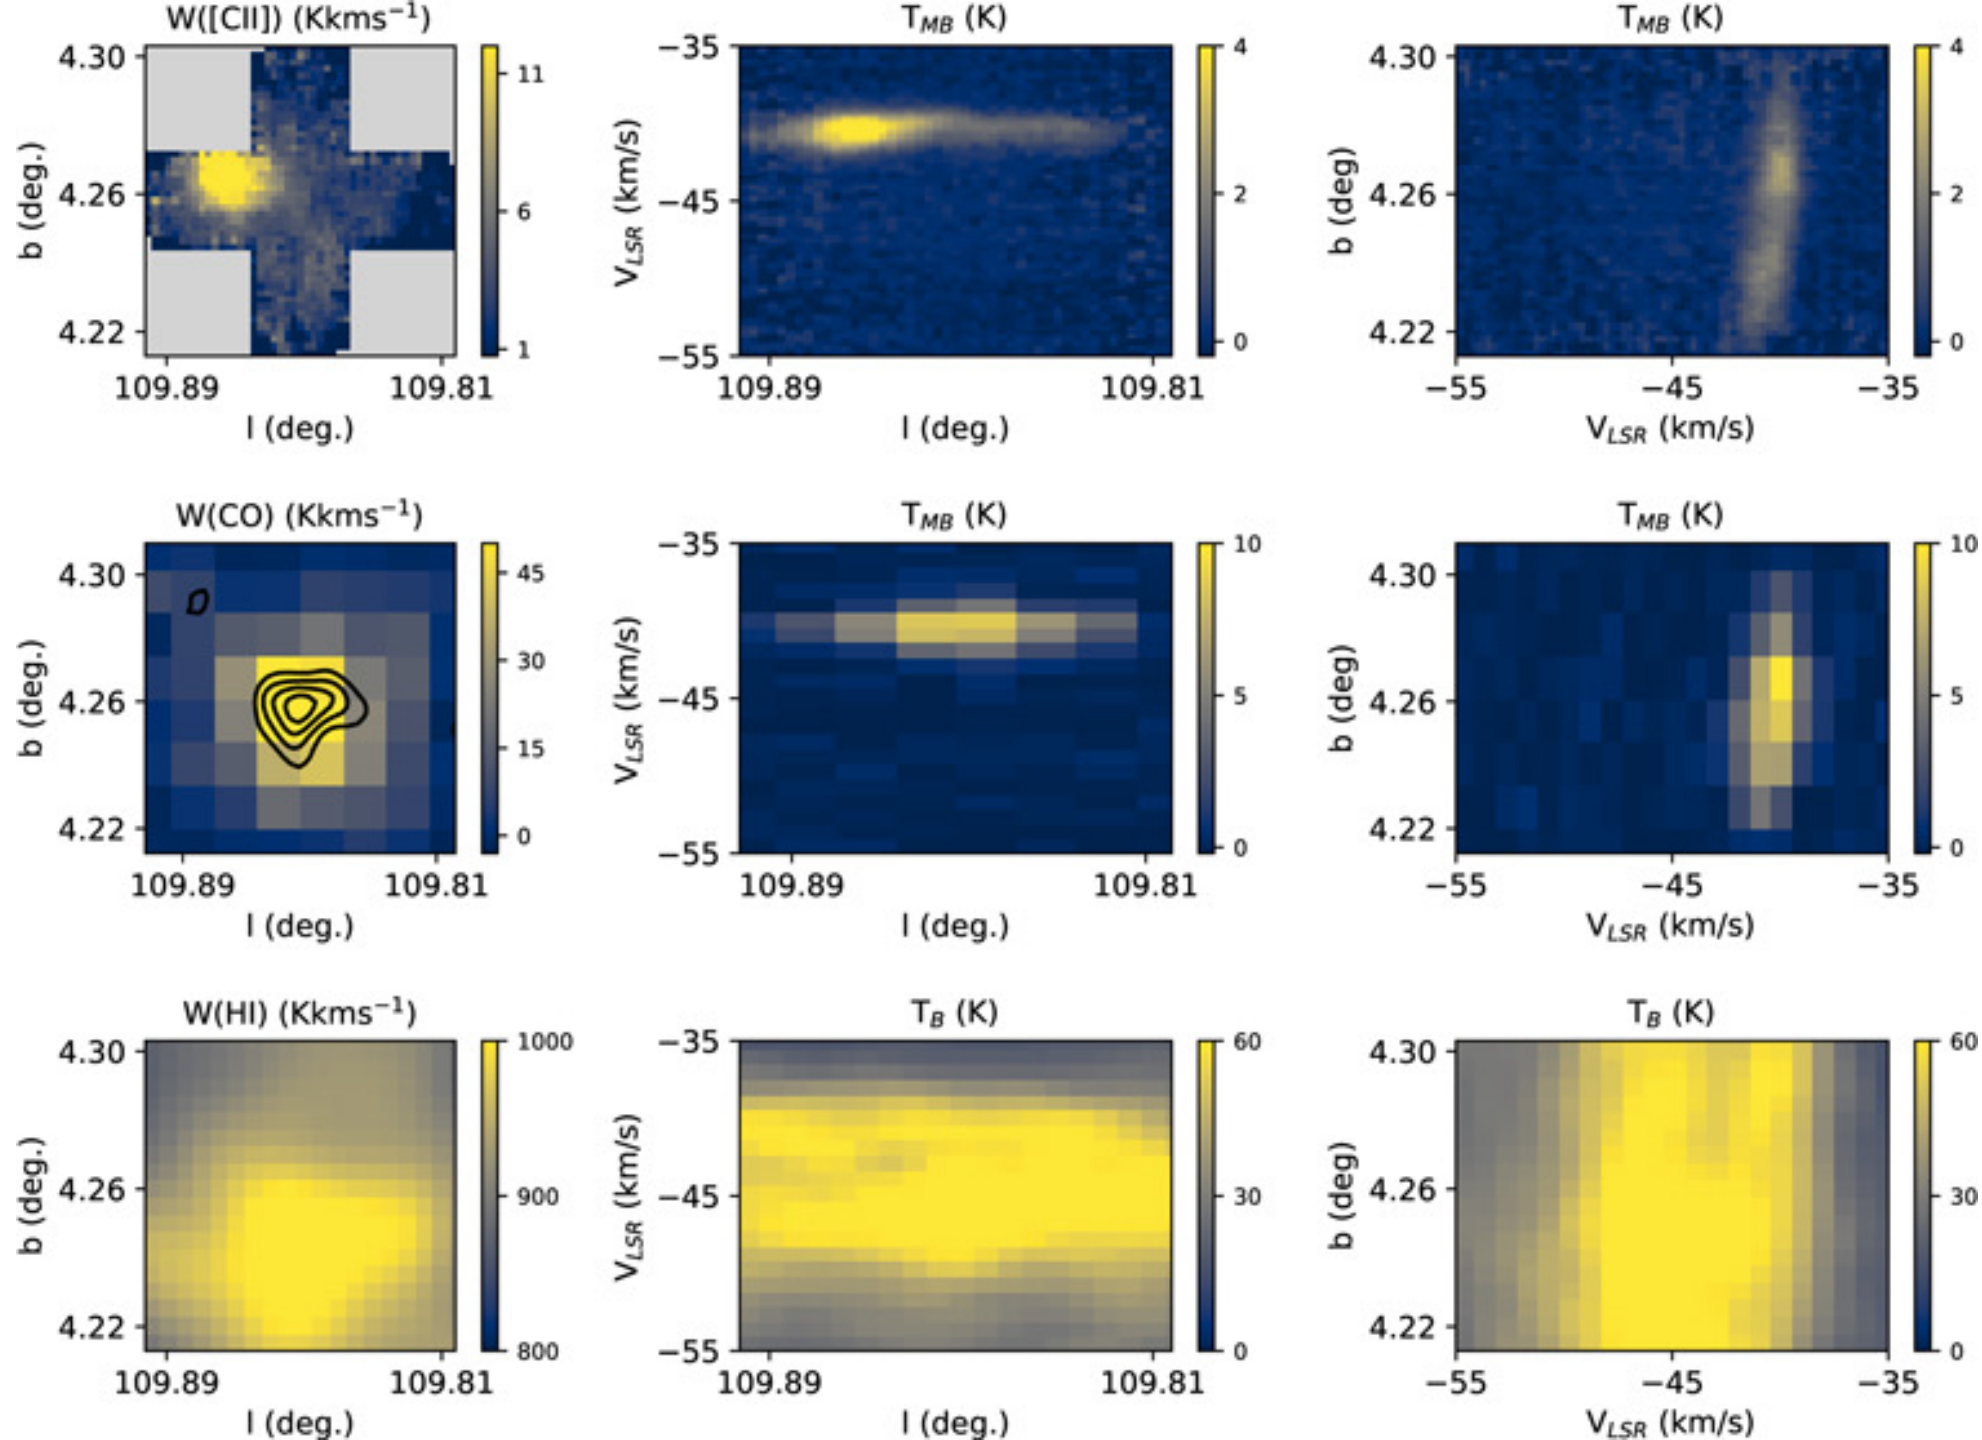

[CII] coverage on CO map after regridding

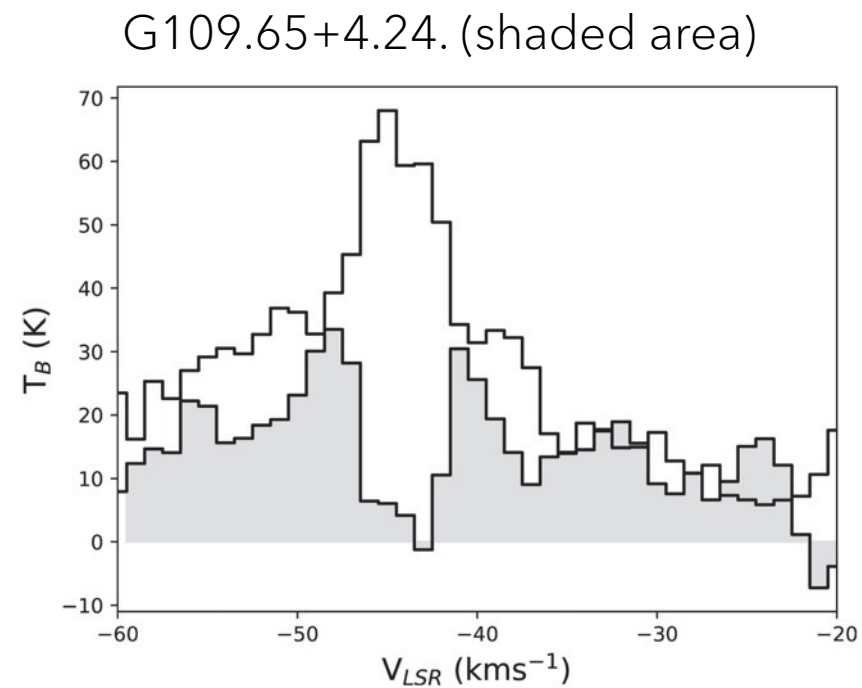

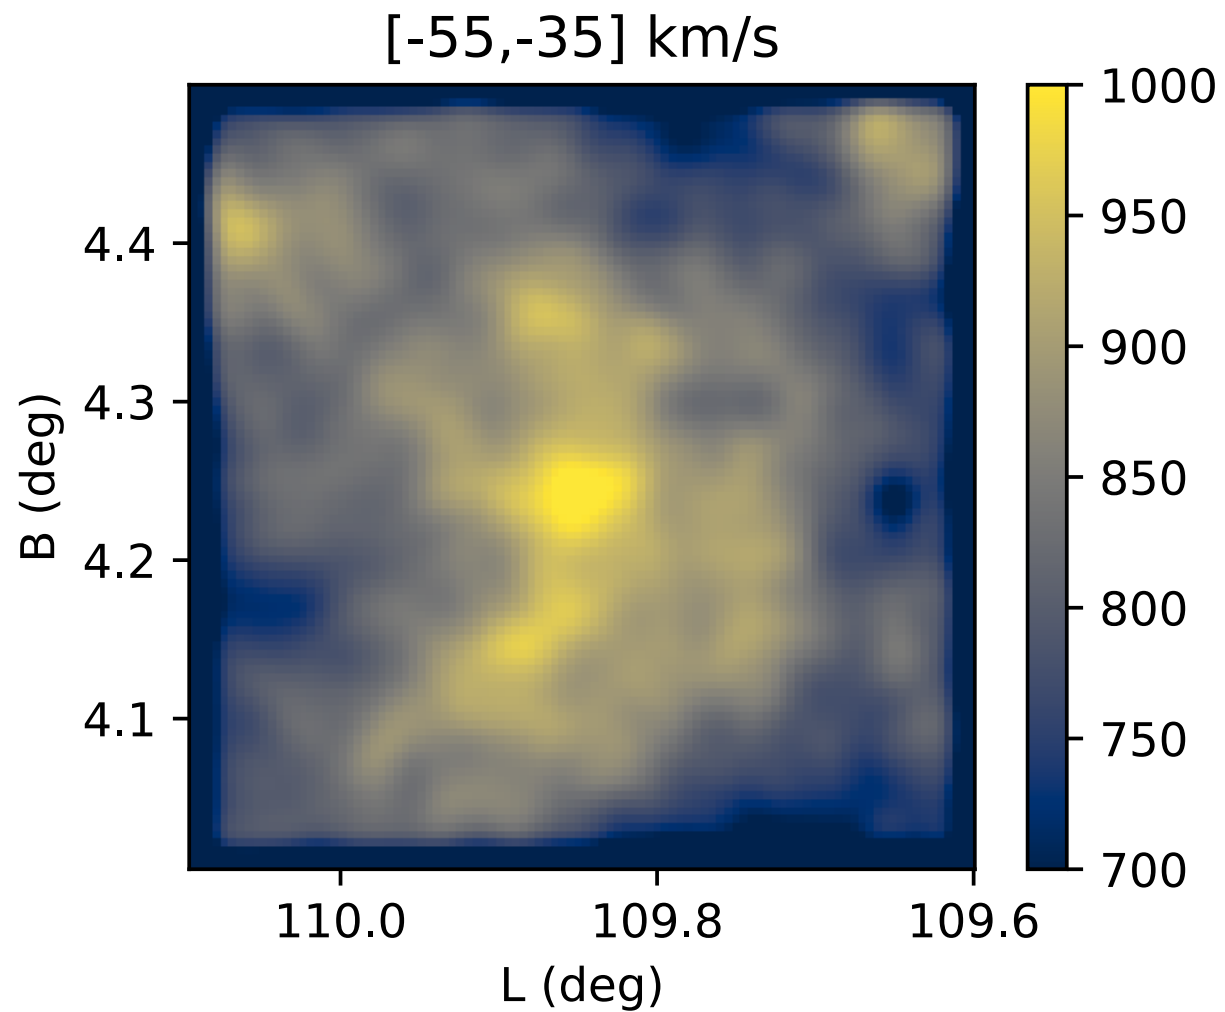

[CII] coverage on CO map after regridding

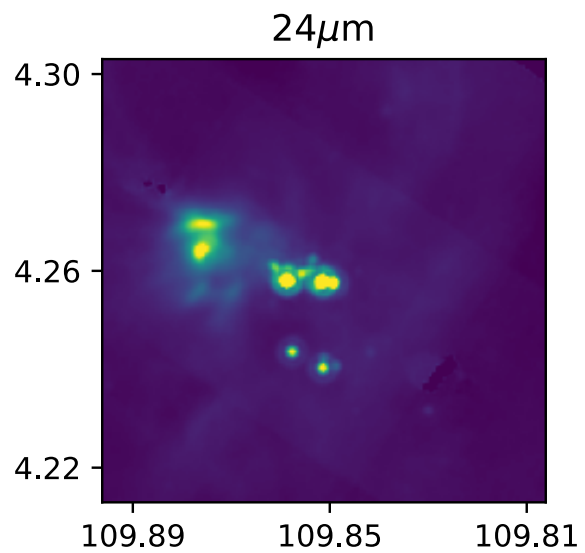

**Median rms = 0.22 K
in 0.25 km/s wide
channels**

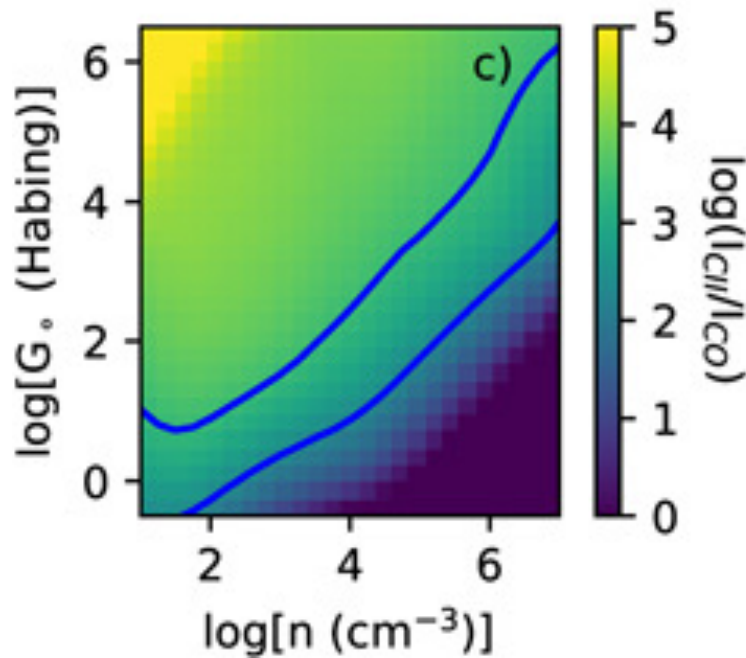

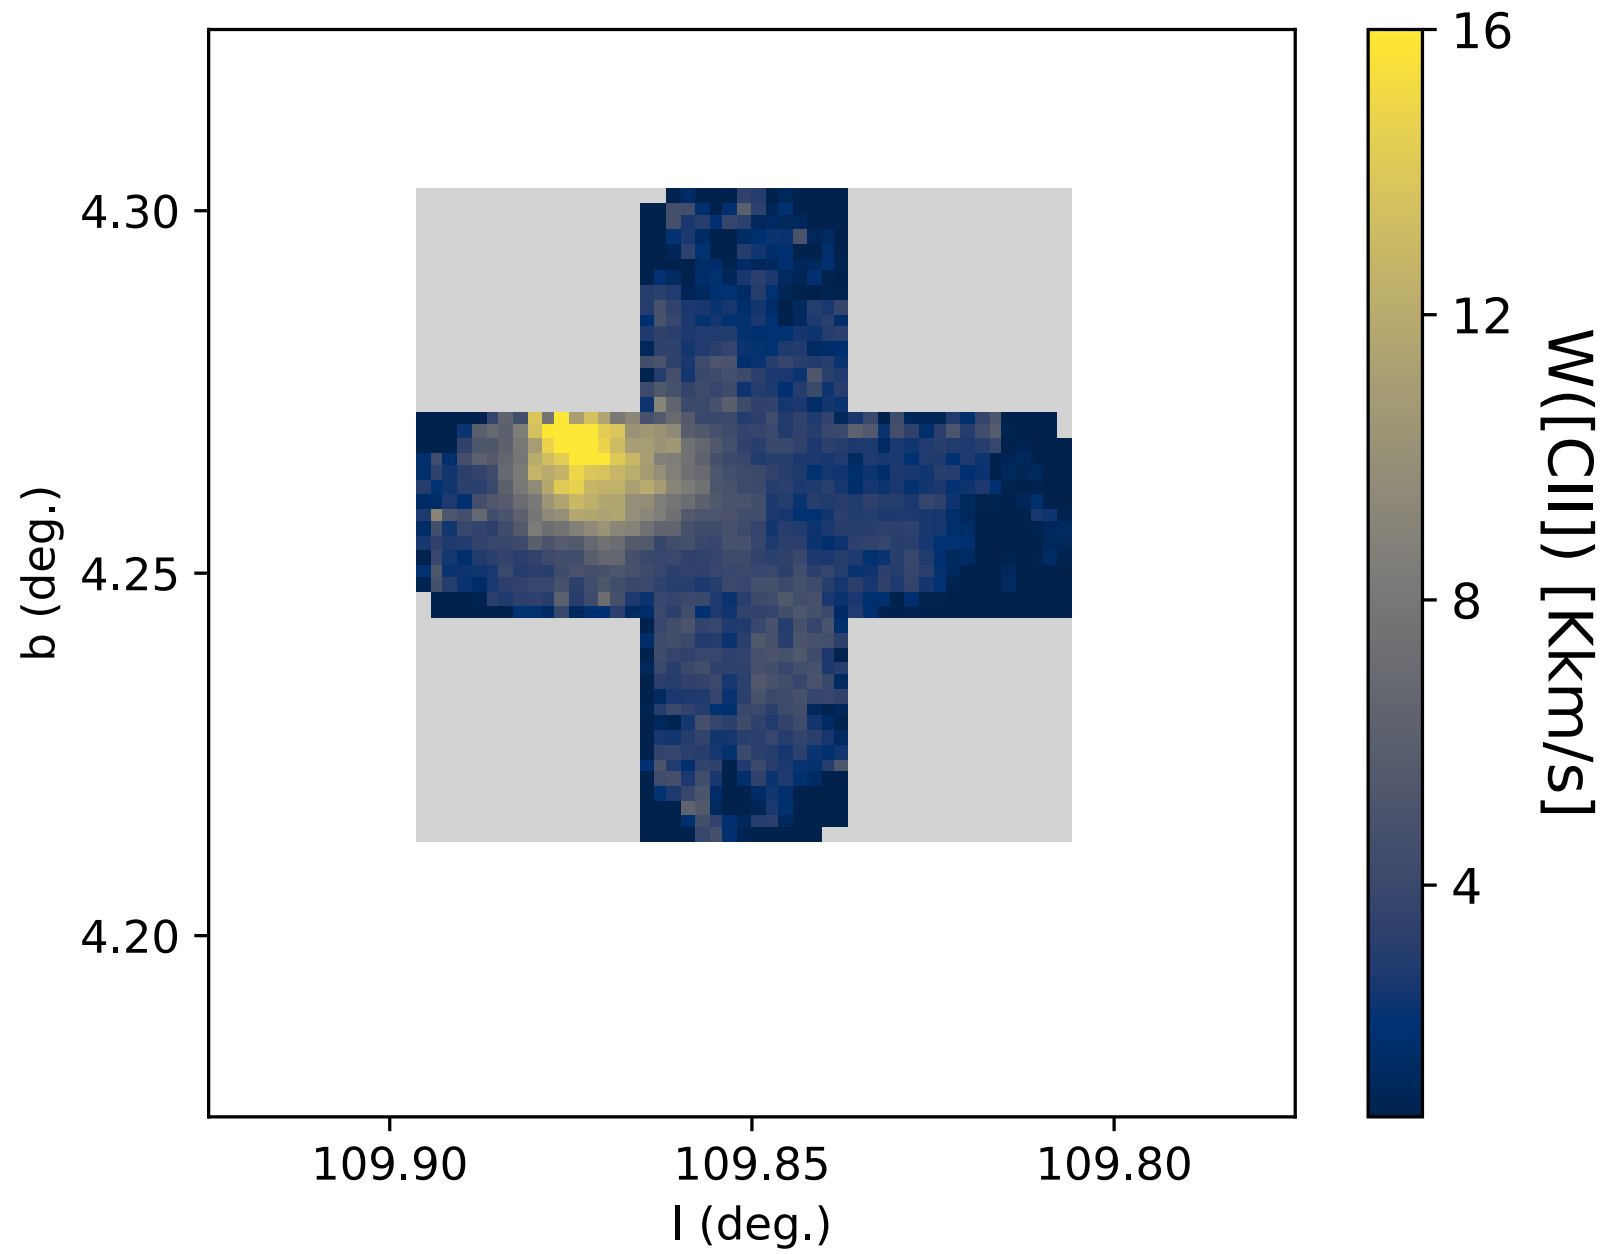

Broader View of HI emission

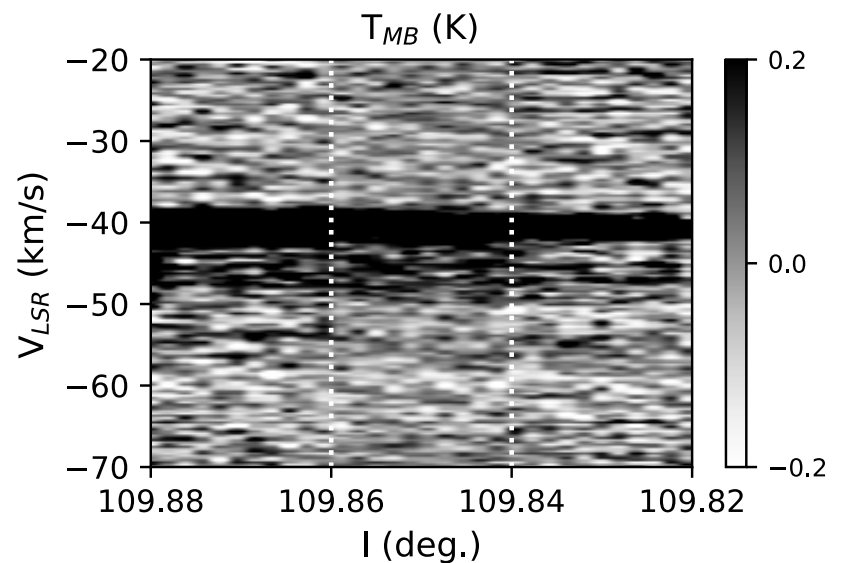

PDR Conditions:
 $2 < \log n < 4$
 $1 < G_0 < 10$

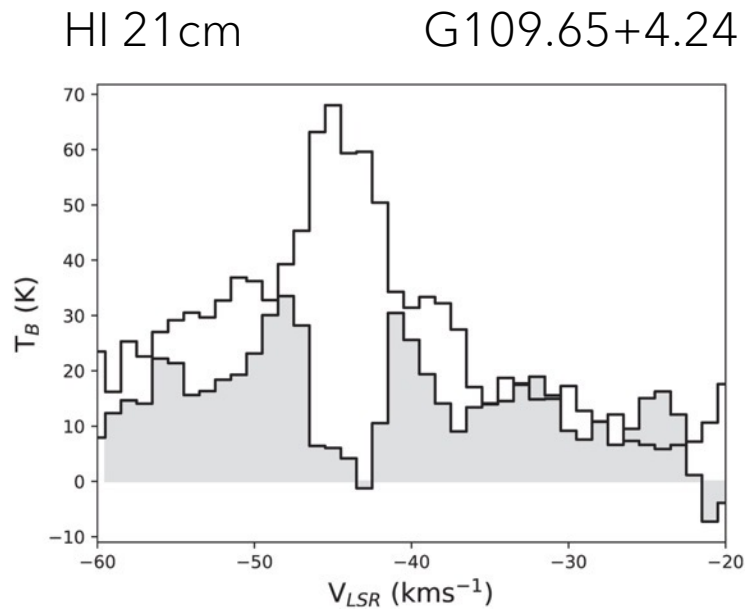

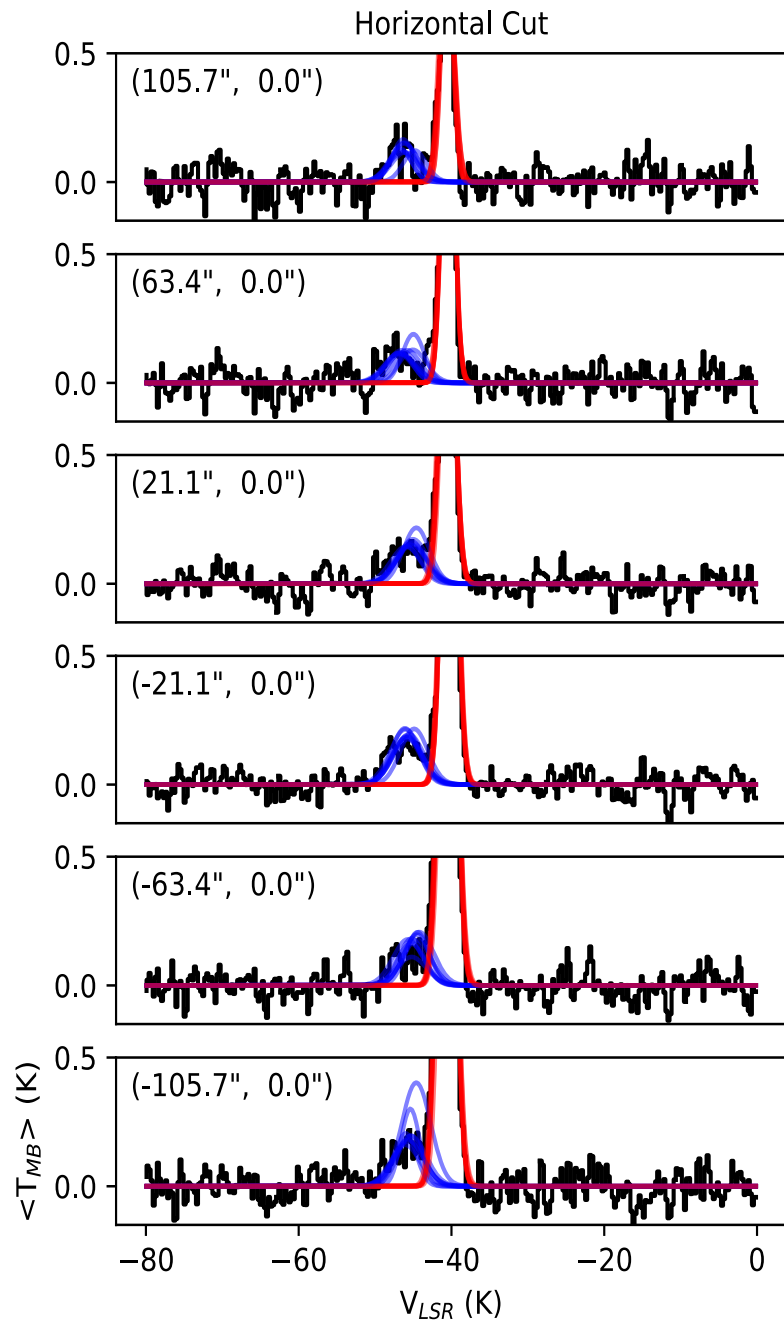

Horizontal Cut

Vertical Cut

Volume Density of [CII] wing component

Assumptions:

Optically thin, Collisional excitation with H, $T_k=100$ K

Langer+ 2010

Goldsmith+ 2018

$$n(H^0) = \frac{3030 (100/T)^{0.14}}{2 \exp\left(-\frac{91.2}{T}\right) (3.43 \times 10^{-16} X - 1) - 1} \text{ cm}^{-3}$$

Where $X=N(C+)/W([CII])$

$$N(C+)=[C/H] 1.823 \times 10^{18} \int T(HI) dv$$

$$W([CII])= \int T([CII]) dv$$

Not the atomic envelope of the CO cloud

CO Cloud Mass = 1100 Msun. Radius = 3 pc

$$\sigma_v = \left(\frac{GM}{5R} \right)^{1/2} = 0.6 \text{ km/s}$$

For $dv=4$ km/s, gas would separate from the CO cloud within a crossing time = 1.5 Myr

Origin of [CII] wing component

Distinct HI CNM cloud that is **NOT** spatially or kinematically associated with BKP7323

Origin of [CII] wing component

HI CNM layer of gas that is streaming onto BKP 7323 with a flow velocity of ~ 4 km/s

- HI 21cm line shows a strong, localized peak at the central zone of the CO cloud
- 3000 Msun reservoir of atomic gas in this velocity interval
- Mass Flow rate = $\rho v_{\text{flow}} L^2$
= 3.2×10^{-4} Msun/yr

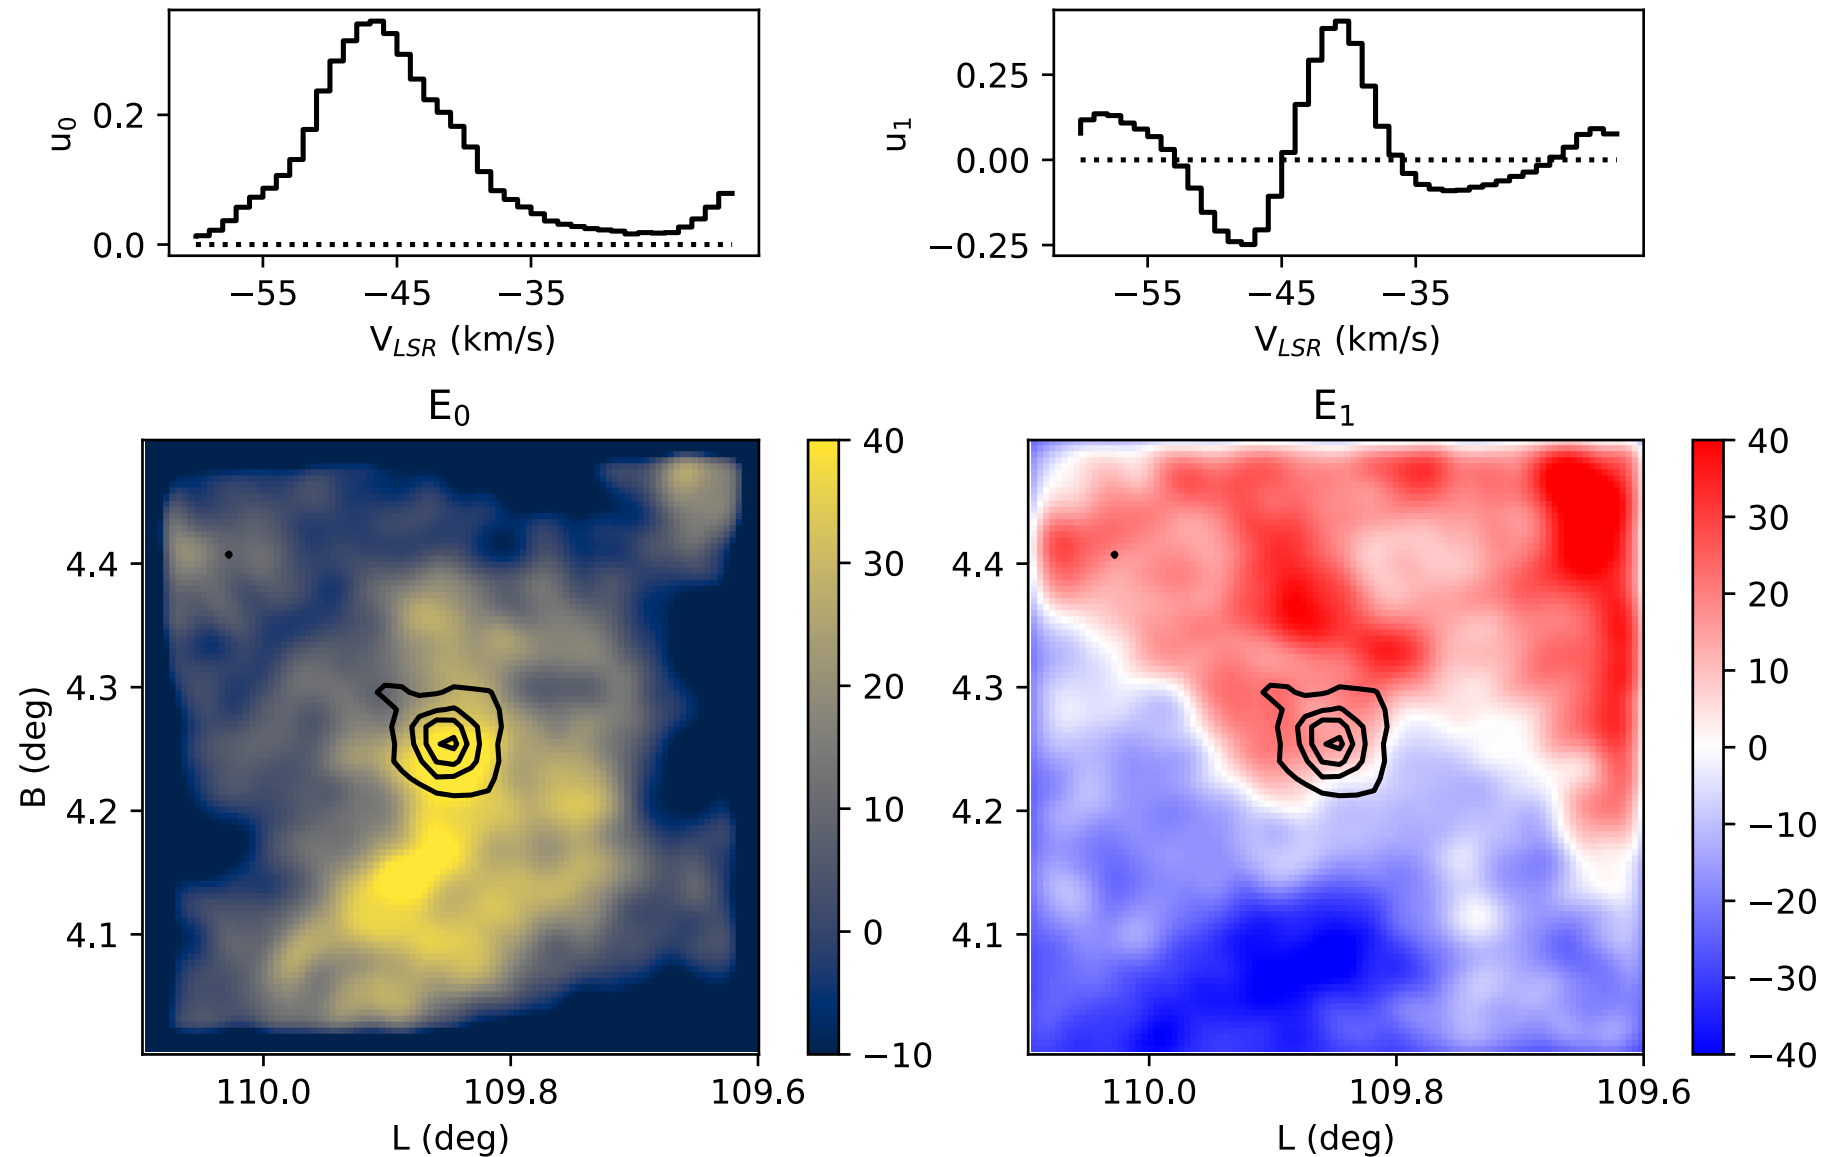

Origin of [CII] wing component

Converging flow HI CNM gas that is onto BKP 7323

PCA of HI 21cm emission

Summary

- Limited mapping of [CII] 1.9 GHz line with upGREAT/SOFIA on an isolated cloud. [CII] is complemented by CO and HI 21cm data
- We find bright [CII] emission from BKP 7323 that corresponds to emission from a PDR excited/illuminated by local star formation activity
- Faint [CII] emission in spatially averaged spectra that tracks either CNM or dark CO gas
- The velocity offset of this faint [CII] emission “may be a signature” to a flow of CNM material onto the developing molecular cloud
